

UID EX 9

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js

PROCEDURE:

Step 1:

Setting Up the HTML Form Start by creating an HTML form with input fields for the email and phone number.<!DOCTYPE html>

```
<html>

<head>

    <title>Validation Form</title>

    <link rel="stylesheet" href="style2.css">

</head>

<body>

<div class="box">

    <h2>Signup</h2>

    <form id="form2">

        <input type="text" id="name2" placeholder="Name"><br>

        <input type="email" id="email2" placeholder="Email"><br>

        <input type="text" id="phone2" placeholder="Phone"><br>

        <button>Register</button>

        <span id="msg"></span>

    </form>

</div>

<script
src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.9.0/validator.mi
```

```
n.js"></script>

<script src="script2.js"></script>

</body>

</html>
```

Step 2:

Styling the Form with CSS Next, add some basic styling to make the form look nice.

```
body {

    background: linear-gradient(to right, purple, pink);

    font-family: sans-serif;

}

.box {

    background: white;

    padding: 20px;

    width: 300px;

    margin: auto;

    margin-top: 120px;

    border-radius: 10px;

    text-align: center;

}

input {

    width: 100%;
```

```

padding: 10px;

margin: 8px 0;
}

button {

background: purple;

color: white;

padding: 10px;

border: none;
}

#msg {

display: block;

margin-top: 10px;

color: red;
}

```

Step 3:

Adding JavaScript for Validation Finally, add JavaScript to validate the input fields using Validator.js and display error messages

```

document.getElementById("form2").addEventListener("submit",
function(e) {

    e.preventDefault();

    let email = document.getElementById("email2").value.trim();

    let phone = document.getElementById("phone2").value.trim();

```

```
let msg = document.getElementById("msg");

if (!validator.isEmail(email)) {

    msg.textContent = "Enter valid email!";

} else if (!validator.isMobilePhone(phone, 'en-IN')) {

    msg.textContent = "Enter valid Indian phone!";

} else {

    msg.style.color = "green";

    msg.textContent = "Success!";

}

});
```

OUTPUT

The image shows a web form titled "Signup" on a purple-to-pink gradient background. The form has three input fields: "Name" with the value "Muhilan", "Email" with the value "m@gmail.com", and "Phone" with the value "7788". Below the fields is a purple "Register" button. A red error message, "Enter valid Indian phone!", is displayed at the bottom of the form.

Signup

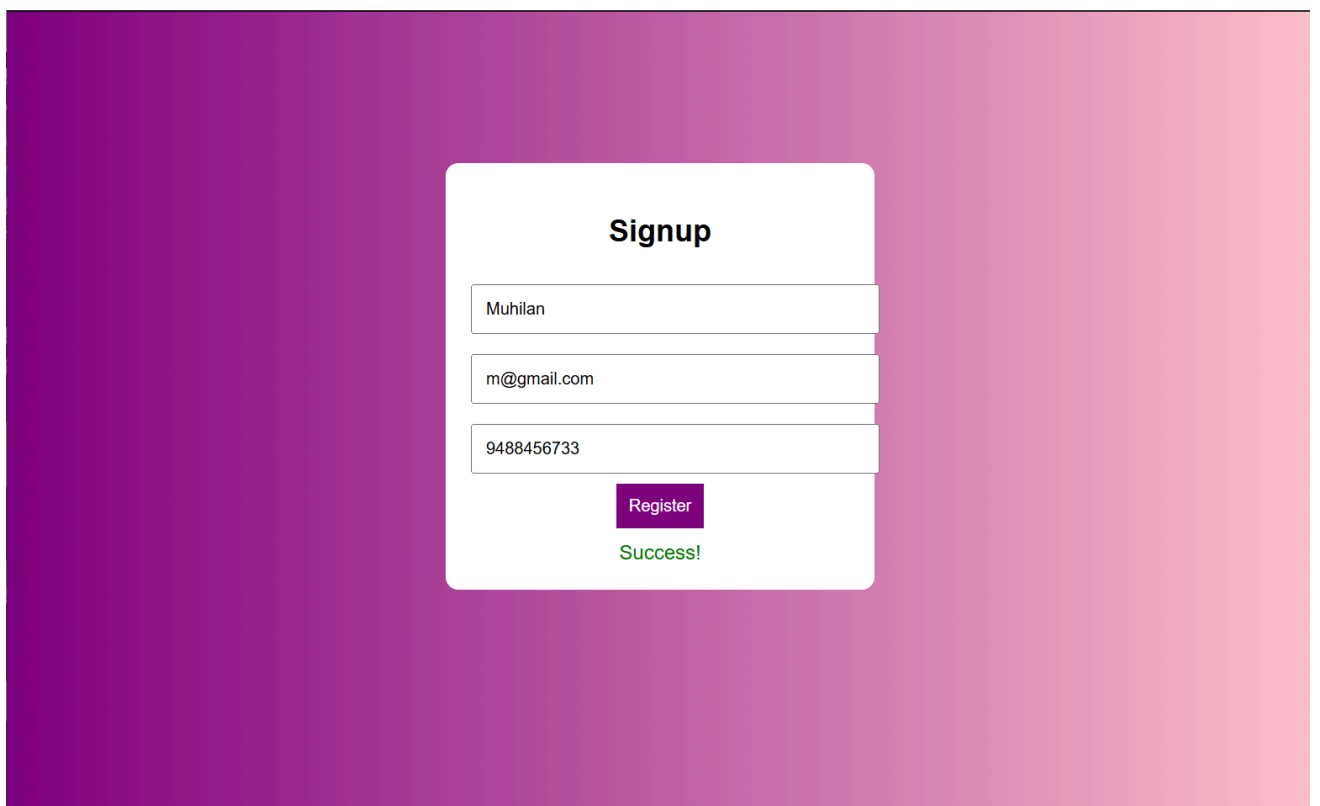

Name Muhilan

Email m@gmail.com

Phone 7788

Register

Enter valid Indian phone!

The image shows the same "Signup" form as above, but with a valid phone number "9488456733" entered in the "Phone" field. The "Register" button is still purple. A green success message, "Success!", is displayed at the bottom of the form.

Signup

Name Muhilan

Email m@gmail.com

Phone 9488456733

Register

Success!
