

EX 5 - Task Analysis – Multi-Restaurant Food Ordering System

Task Analysis – Multi-Restaurant Food Ordering System

Task Analysis

Task Analysis involves breaking down a user's interactions with a multi-restaurant food ordering app into smaller, actionable steps. This helps understand how users search for restaurants, select menu items, place orders, make payments, and receive delivery. Performing task analysis highlights user pain points, inefficiencies, and opportunities to enhance the ordering experience.

Key Aspects of Task Analysis:

- Understanding the tasks users perform: browsing restaurants, adding items to cart, placing orders, and payment processing.
 - Identifying the sequence of actions required to complete a food order from multiple restaurants.
 - Analyzing potential pain points such as unavailable items, failed payments, delayed delivery, or app navigation issues.
 - Defining requirements to improve usability, reduce errors, and enhance customer satisfaction.
-

User Flow

User Flow

User Flow is a visual representation of how users navigate through the Multi-Restaurant Aggregator App to successfully place an order. It captures all actions from opening the app to order delivery and feedback.

User Flow for Multi-Restaurant Aggregator App

Start → Open App → Login/Register → Search/Filter Restaurants → Select Restaurant → View Menu → Add Items to Cart → Continue Ordering? → Proceed to Checkout → Enter Delivery Details → Choose Payment Method → Payment Confirmation → Order Sent to Restaurant → Kitchen Prepares Order → Delivery Partner Assigned → Track Delivery → Order Delivered → Provide Feedback → End

User Flow – Step by Step

Step 1: Start

- The user opens the Multi-Restaurant App.

EX 5 - Task Analysis – Multi-Restaurant Food Ordering System

- Home or splash screen is displayed.

Step 2: Login or Register

- Existing users log in using email, phone, or social login.
- New users register with Name, Email, Phone, and Password.

Step 3: Search / Filter Restaurants

- The user searches or filters restaurants by cuisine, ratings, location, or popularity.
- A search bar allows quick access to favorite restaurants.

Step 4: Select Restaurant

- The user selects a restaurant to view its menu and available items.

Step 5: View Menu

- Menu items are displayed with images, descriptions, and prices.
- Users can customize orders (size, toppings, spice level, etc.).

Step 6: Add Items to Cart

- The user selects items and adds them to the cart.
- Cart maintains a running total of all selected items, including taxes and delivery charges.

Step 7: Continue Ordering?

- Decision: Does the user want to order from another restaurant or continue adding items?
 - Yes → Return to **Search / Filter Restaurants**
 - No → Proceed to **Review Cart**

Step 8: Review Cart

- The user reviews the cart, updates quantities, or removes items as needed.

Step 9: Proceed to Checkout

- User clicks checkout to finalize the order.

Step 10: Enter Delivery Details

- The user enters the delivery address, preferred delivery time, and contact number.

EX 5 - Task Analysis – Multi-Restaurant Food Ordering System

Step 11: Select Payment Method

- Payment options include:
 - Online Payment (UPI, Debit/Credit Cards, Wallets)
 - Cash on Delivery (COD)

Step 12: Payment Confirmation

- If online payment is selected, the system verifies the transaction.
- If the payment fails, the user is prompted to retry or select another method.

Step 13: Order Sent to Restaurant

- The app forwards the order details to the selected restaurant(s).
- Kitchen staff marks the order as **preparing**.

Step 14: Delivery Partner Assigned

- The app assigns a delivery partner automatically.
- The user receives notifications about delivery assignment and estimated time.

Step 15: Track Delivery

- Users can track the delivery partner's location in real-time.
- Notifications are sent when the order is out for delivery and approaching the delivery location.

Step 16: Order Delivered

- The delivery partner hands over the food to the customer.
- The app updates the order as delivered.

Step 17: Provide Feedback

- User can rate the restaurant and delivery experience.
- Feedback may include reviews, ratings, or reporting issues.

Step 18: End of Process

- The order process is complete.
